GitHub: @holmosaint

EDUCATION

Stanford University

PhD student in Bioengineering

Stanford, USA

Sept 2023 - Expected June 2028

University College London

MRes in Biosciences: Neuroscience (with Distinction, top 1)

London, UK

Sept 2021 - Sept 2022

Peking University

BS in Computer Science (outstanding dissertation nomination, 27/360)

Beijing, CN

Sept 2016 - Jun 2020

AWARDS

Dean's List of Division of Biosciences of University College London (top 5%)

Nov 2022

Best Overall Student Prize of MRes Biosciences of University College London

Nov 2022

Outstanding Graduate of Peking University

Jul 2020

Robin Li Scholarship of Peking University

Sept 2019

Excellent Research of Peking University

Sept 2019

Ke Chuanglong Scholarship of Peking University

Sept 2018

Merited Student of Peking University

Sept 2018 & Sept 2017

May Fourth Scholarship of Peking University

Sept 2017

SELECTED RESEARCH PROJECTS

A theoretical framework to investigate the computational principles of cortical cell types University College London

Advised by Prof. Michael Häusser, Dr. Brendan Bicknell and Prof. Beverley Clark

Dec 2021 - Present

- Derived a general learning rule based on cable theory, Hodgkin-Huxley equations and synaptic kinetics with which detailed models of neurons, comprising 3D reconstructed morphologies and an array of active conductances, can be trained to perform sophisticated computational tasks.
- Designed a battery of tasks with distinct processing requirements, including: nonlinear feature-binding computations, Boolean logic operations, and a regression task designed to test the limits of stimulus selectivity.
- Identified a diverse set of morphological and biophysical features to explain the computational performances of different neuron models.
- Constructed an efficient and flexible software package from scratch to support the training of neuronal models and analysis.

Inferring monosynaptic connectivity from spike trains

Beijing Academy of Artificial Intelligence

Advised by Prof. Kai Du (PKU) and Prof. Jun Ding (Stanford)

Jan 2020 - Sept 2022

- Formulated a critical challenge in previous methods for inferring monosynaptic connectivity as the out-of-distribution problem, a fundamental problem in machine learning.
- Developed a systematic solution by incorporating self-training and domain adaptation techniques.
- Achieved 100% accuracy in inferring monosynaptic connectivity using *in vivo* spike trains from the CA1 networks of freely-running mice.
- Extended the framework to accurately and efficiently infer biophysical properties of 574 neurons across 14 brain regions of mice as well as the stomatogastric ganglion microcircuit of the *Cancer Borealis*.

Decoding time from population activities of suprachiasmatic nucleus

Beijing Academy of Artificial Intelligence

Advised by Prof. Heping Cheng and Prof. Lei Ma

Jan 2021 - Sept 2021

- Identified circular time representations within suprachiasmatic nucleus (SCN) through principle component analysis on population calcium activities.
- Revealed that hourly time information could be decoded from activities of ~ 900 randomly selected neurons, suggesting population coding of time in SCN.
- Analyzed the contribution of individual neurons in encoding hourly information using integrated gradients, revealing a distribution of contributions that resembled a Gaussian shape.
- Took a leading role in generating a main figure and composing the relevant manuscript section

WORKING EXPERIENCE

Physical Science Research Professional

Department of Neurosurgery

Stanford University

July 2023 - Aug 2023

- Performed dynamical and manifold analysis on calcium imaging data recorded from axon boutons projected from M1 to basal ganglia during motor learning.

Research Assistant

Neural Computation Lab

University College London

Oct 2022 - Jul 2023

- Established a theoretical framework for investigating principles of single neuron computation.

Research Assistant

Electrophysiology Atlas Task Force

International Brain Laboratory

Oct 2022 - Jul 2023

- Facilitated the development of the electrophysiology atlas platform.

Leader of Applied Research Team

Life Simulation Research Center

Beijing Academy of Artificial Intelligence

Jun 2021 - Sept 2021

- Organized research cooperation among researchers and interns.
- Scheduled and summarized weekly discussions on the progress of research projects of the group members.

Software Development Engineer

Life Simulation Research Center

Beijing Academy of Artificial Intelligence

Jun 2020 - Sept 2021

- Developed an automatic tool for parameter estimation and optimization for computational neural models.
- Published a preprint paper of the tool on bioRxiv.

TEACHING EXPERIENCE

Teaching Assistant

Compiler Practice

- Guided students to work through each stage of compiler design, including symbol table construction, type check, intermediate representation generation, register allocation.

Peking University

Feb 2020 - Jun 2020

Teaching Assistant

Algorithm Design and Analysis Seminar

- Reviewed and expanded lecture content based on *Introduction to Algorithms*.
- Designed exam papers and provided references on reinforcement learning.

Peking University

Feb 2019 - Jun 2019

ACADEMIC SERVICE

Reviewer of Bioscience Horizons

Nov 2021 - Nov 2022

LEADERSHIP EXPERIENCE

President and Captain

Badminton Association and Team of Peking University

Peking University

Sept 2019 - Jun 2020

- Organized badminton competitions at Peking University and scheduled friendly matches among colleges.
- Popularized badminton through social media at Peking University.
- Led weekly training and competitions.

SKILLS

Languages

Python, C/C++, MATLAB

Framework

NEURON, NEST, PyTorch
